

Anti-Human VENTX, monoclonal

Alternate Names: Homeobox protein VENTX

Cat. No. 13-084

FOR RESEARCH USE ONLY

NOT FOR USE IN HUMANS

PRODUCT DESCRIPTION

UniProt Summary

UniProt

Primary Accession: [O95231](#)

May be involved in ventralization. Nucleus (Probable). Expressed in bone marrow of patients recovering from chemotherapy. Also expressed in an erythroleukemia cell line. Contains 1 homeobox DNA-binding domain.

Physical Characteristics

Quantity: 1 ml (culture supernatant) or 100ug at 1mg/ml (purified)

Format: culture supernatant or purified material

Host/Isotype: mouse IgG2b

Clonality: monoclonal; ID R330.2.2A9

Formulation: culture supernatant contains 0.02% NaN₃. Purified material contains 30% glycerol, PBS and 0.02% NaN₃

Specificity: monospecific for human VENTX ; see "Microarray Analysis" below

Reactivity: human; not tested for cross reactivity in other species

Stability/Storage: 12 months long term: -20°C; short term: 4°C; avoid freeze-thaw cycles; aliquot as required

Handling Notes: small volumes of antibody may occasionally become entrapped in the seal of the product vial during shipment and storage; briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container cap

Tested Research Applications

- Western Immunoblotting - Not recommended
- Immunoprecipitation - PASS by SOP

Antibody tested as purified IgG. Optimal dilution to be determined by user.

Quality Assurance

Notes:

1. Please refer to the SOP manual ([click here](#)) to for detailed explanation of the experimental setup and thresholds used to evaluate the results shown below.
2. Predicted MW of the target protein expressed in the western immunoblotting (WB) and imprecipitation (IP) experiment is **28.49kDa** and the three fusion tags (venus, 3xFLAG, V5) adds another **38.7kDa** to this protein. Therefore the protein is expected to migrate **~67.19kDa** in a denatured SDS-PAGE gel.
3. See results below for any applicable cautionary notes.

PRODUCT DESCRIPTION

Quality Assurance (HuProt™ Array)

About Z and S Scores: The z-score represents the strength of a signal that a mAb (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProt™ array. Z-scores are described in units of standard deviations (SDs) above the mean value of all signals generated on that array. To be considered a definite binding event between a mAb and a protein target, the z-score must have a value of at least 2.5 (SDs above the mean). The s-score represents the relative target specificity of a mAb, and is the difference (also in units of SDs) between the z-score a mAb generates upon binding to one protein and the next highest z-score that the mAb generates against another protein. For example, if a mAb binds to protein X with an z-score of 43 and to protein Y with an z-score of 14, then the s-score for the binding of that mAb to protein X is equal to 29.
